

The compliance bridge that makes RWAs DeFi-composable

\$30B of tokenized real-world assets sit on-chain, but only ~8% can move in DeFi — locked behind KYC allowlists and transfer agents. Passage puts compliance inside the token itself, so RWAs can finally be swapped, lent, and used as collateral while every holder stays verified.

14/14

integration tests passing

Deposit a permissioned RWA → receive a pToken 1:1 (Token-2022 + transfer hook) → every transfer verifies the recipient on-chain → freely composable, always compliant

WHY PASSAGE WINS

- **Compliance travels with the asset**, not the venue — protocols stay open, assets stay compliant.
- **Neutral infrastructure**: one layer for every issuer (Ondo, Centrifuge, Maple) and every DeFi venue — we make their assets more valuable.
- **Working product**: vault, identity registry, transfer hook and a gated AMM — open source, live on devnet.
- **Real revenue from day one**: 0.10% wrap/unwrap fee + 0.25% swap fee, 100% to the treasury. No emissions, no ponzinomics.
- **Regulator-ready**: on-chain KYC audit trail on every transfer; MiCA legal structuring budgeted before mainnet.

\$PASS TOKENOMICS

- **10M supply**, high float — distributed via MetaDAO ICO, no VC allocations, no hidden deals.
- **Raise**: min \$1.8M, capped at \$4M. Oversubscription refunded pro-rata in USDC.
- **Treasury** governed by futarchy markets — every spend above budget needs market approval.
- **Team**: paid in treasury USDC on milestones (capped \$1M); 10% performance tokens locked until 2x/4x/8x, 18-month vesting. Zero token sell pressure.
- **20% of raise** + 2.9M tokens seed protocol-owned liquidity.

OPERATING BUDGET (PRE-APPROVED)

MONTHLY	USD
Founder	16,000
Second developer	10,000
Advisors (2x, part-time: legal/MiCA + issuer relations)	10,000
Marketing & community	8,000
Infrastructure & tooling	1,500
KYC provider	1,000
Entity, accounting, admin	1,500
Contingency	2,000
Total	~50,000 / mo

One-time: audit \$40k · legal/MiCA \$60k · entity \$15k · listings & integrations \$30k · bug bounty \$20k ≈ **\$165k**
The math: 18 mo × \$50k + \$165k ≈ \$1.07M. A \$1.8M raise leaves \$1.44M treasury after liquidity — a ~\$375k buffer.

ROADMAP

Now	MVP on devnet · open source · community build-up
Q+1	Audit · mainnet · first issuer asset · MetaDAO ICO
Q+2	KYC provider live · 2-3 assets · pToken/USDC pools
Q+3/4	Lending collateral · \$5M+ TVW · zk-credentials
